

Arshia Hemati

Full-stack Software Engineer

www.ArshiaHemati.com | arshia.hemati@gmail.com | Salzburg - Austria | GMT+1 | RWR+ Visa, No sponsorship required

Full-Stack Software Developer with strong experience in building end-to-end systems using **.NET, Angular, Node.js, Python, and SQL/NoSQL databases**. Sole developer and founder of **Elyt** , a commercial browser automation platform focused on agentic AI and web automation, delivered from concept to production. Skilled in delivering scalable modern solutions that create real business impact.

SKILLS

Programming Languages: C#, Typescript, Javascript, Python, SQL, PL/SQL

Backend & Databases: .NET 8, ASP.NET Core, Entity Framework Core, Node.js, Express.js, FastAPI, Redis, MongoDB, MySQL, Oracle, PostgreSQL, SQL Server

Frontend: Angular, RxJS, Astro, Bootstrap, SCSS, Tailwind CSS

DevOps & Testing: Azure, Azure DevOps, Github Actions, Vercel, CI/CD, Docker, Jest, Playwright, Puppeteer, pytest, xUnit, TDD

Architecture & Practices: GraphQL, gRPC, SSO, RBAC, JWT, OAuth 2.0, OpenAPI, Contract-First API Design, REST, SOLID, System Design, WebSockets, Agile, Scrum

AI & Automation: Agentic AI Systems, LangChain, LLM API Integration (OpenAI, Anthropic, Gemini), MCP

WORK EXPERIENCE

Axess AG , Full-stack Software Engineer

08/2023 – Present

- Spearheaded a full re-architecture from legacy monolith (without DI, tests, or separation of concerns) to domain-separated services following SOLID with test coverage, establishing TDD as standard practice and enabling parallel development across decoupled domains, **increasing development speed** and **scalability**.
- Built a multi-tenant B2B POS system from scratch as sole developer with device-agnostic hardware abstraction and integrated payment processing, deployed to **20+** venue operators handling **20,000+** monthly transactions.
- Engineered real-time bi-directional state synchronization with event propagation between the enterprise platform and customer middleware in **milliseconds**, enabling software and hardware endpoints on both sides to read and write against a shared synced state across **10+** enterprise customers.
- Built a custom enterprise SSO/OAuth framework from the ground up across **2 product lines**, integrating with customer identity providers for automated provisioning and dual-auth flow, now the standard for **all new enterprise onboardings**.
- Conducted code reviews and mentored **two** junior developers and **multiple** interns to independent feature delivery.

Skills: Angular 17-18 (primary), .NET 8 (primary), TypeScript (primary), JavaScript (primary), Oracle (primary), RxJs, ASP.NET Core, ASP.NET MVC, EF Core, NHibernate, PL/SQL, WPF (basic), Redis, xUnit, Jest, Docker, Azure DevOps, Jira, GitHub Actions

Atra Ltd , Full-stack Software Developer

01/2021 – 08/2022

- Designed and built a real-time trade operations platform serving **200+** daily cross-border transactions across **8 international markets**, with live order tracking, automated multi-currency invoice generation, and webhook-driven partner notifications for **30+** active trading partners.
- Implemented Redis caching and automated market data pipelines that aggregated pricing from **15+ international trade platforms**, processing **10,000+** daily price updates through background job queues and delivering real-time analytics dashboards to the operations team.
- Built CI/CD pipelines in Azure DevOps with Docker containerization, automated test gates, and staged deployments to Azure, **reducing release cycles** from bi-weekly manual deploys to **3+ releases per week** across **4** environments.

Skills: C# (primary), Angular (primary), .NET (primary), TypeScript (primary), Python (primary), ASP.NET Core, PostgreSQL, SQL Server, MongoDB, Redis, Docker, Azure, Azure DevOps

PROJECTS

Elyt

- Designed and built a **3-tier** distributed platform: Angular Front end, Node.js orchestrator, and FastAPI execution engine capable of workflow orchestration, execution and scheduling **of AI Agents and web automation scripts in mass** while enforcing zero-drift contracts through automated cross-language type generation.
- Built a visual workflow engine with node-based composition, sequential/parallel execution, and real-time state tracking, supporting recurring and timezone-aware batch automation **resulting in autonomous scheduled execution** of AI workflows.
- Built a provider-agnostic LLM abstraction layer currently supporting **5** providers with MCP extensibility. **Allowing users to dynamically switch AI models** within workflows and executions depending on business use.
- **Delivered cross-platform from a single codebase:** Angular Web app, WebView2 desktop application, and browser extension with shared authentication through SSO / OAUTH middleware, now in production. More details on www.ArshiaHemati.com

EDUCATION

FH Salzburg, Information and technology systems (ITS)

09/2023 – 06/2024 | Salzburg, Austria

IBC Hetzendorf, Business

09/2022 – 09/2023 | Vienna, Austria

Payame Noor University, Computer Science

03/2021 – 08/2022 | Ilam, Iran

LANGUAGES

English: Fluent | **German:** Professional proficiency | **Persian:** Native
